

$$\bullet (B' + C'D' + A') \quad \text{--- (Postulate 4(b))}$$

Rearranging the terms and removing repeated terms:

AB \ CD

	00	01	11	10
00	0	0		
01	1	0		
11	0	0		
10				

Simplified POS $F = (B+C) \cdot (A+C)$

$$\begin{aligned} (B^+C) \cdot (A^+C) &= ((B^+C) \cdot (A^+C))'' \text{ (Thm 3)} \\ &= ((B^+(C'))' \cdot (A^+(C'))')'' \text{ (Thm 3)} \\ &= (B \cdot C')' \cdot (B^+ \cdot C')' \text{ (Thm 5(b))} \end{aligned}$$

Q. 3-10: Simplify each of the following functions and implement them with NOR gates

[illegible]
